

Data type validation tests

The screenshot shows the Cypress test runner interface. The browser window displays the URL `https://api.themoviedb.org/_/#/tests/integration/check_2.js`. The test suite `data_type_validation_tests` is expanded, showing a single test `verify_data_types`. The test is a GET request to `https://api.themoviedb.org/3/discover/movie?api_key=606aaffd7ca10f0b80804a1f0674e4e1`. The test results show 10 assertions, all of which passed:

- 1. `expected 200 to equal 200`
- 2. `expected 1 to be a number`
- 3. `expected [Array(20)] to be an array`
- 4. `expected false to be a boolean`
- 5. `expected Avengers: Infinity War to be a string`
- 6. `expected [12, 28, 53] to be an array`
- 7. `expected {} to be an object`
- 8. `expected Close to be a string`
- 9. `expected Close to be a string`
- 10. `expected 40 to be a string`

The console shows the response body, which is an array of 20 movie objects. The first few objects are:
